Marwadi University

A.Y. 2025-26

DECLARATION

We hereby declare that the Mini Project (01CE0609) report submitted along with the Project entitled Learning Reminder & Study Planner submitted in partial fulfilment for the degree of Bachelor of Technology in Computer Engineering to Marwadi University, Rajkot, is a bonafide record of original project work carried out by us at Marwadi University under the supervision of Prof. Monisha Mohan and that no part of this report has been directly copied from any students' reports or taken from any other source, without providing due reference.

1. Safik Sherasiya Sign: _____
2. Nisar Badi Sign: _____
3. Azim Kadivar Sign: _____

ACKNOWLEDGEMENT

We take this opportunity to express our sincere gratitude to all those who have supported and guided us throughout the development and completion of this Mini Project.

We are deeply thankful to our Internal Guide, Prof. Monisha Mohan, Department of Computer Engineering, Faculty of Engineering & Technology, Marwadi University, Rajkot, for her valuable guidance, constructive suggestions, and continuous encouragement throughout the project.

We are grateful to the Head of Department and all faculty members of the Department of Computer Engineering for providing us with the necessary facilities and academic support.

We also sincerely thank the management of Marwadi University for providing an excellent academic environment that enabled us to carry out this project effectively.

Finally, we express our heartfelt thanks to our family and friends for their constant moral support and motivation.

Safik Sherasiya, Nisar Badi, Azim Kadivar

Department of Computer Engineering, Marwadi University, Rajkot

ABSTRACT

The Learning Reminder and Study Planner is a web-based application designed to help students efficiently manage their academic responsibilities, including study schedules, tasks, and deadlines. As academic workloads continue to increase, many students face challenges with time management, often resulting in missed deadlines, poor exam preparation, and reduced productivity. This system offers a centralized platform where students can organize subjects, create structured study plans, set reminders for important academic activities, track their study sessions using a live timer, monitor progress in real time, and maintain a daily study streak. Developed using HTML, CSS, and JavaScript for the frontend, PHP for backend processing, and MySQL (MariaDB) as the database, the application runs on a XAMPP local server environment. It also includes a motivational reward system that tracks task completion milestones and assigns badges and points—stored directly in the users table—to encourage consistent study habits and discipline. Additionally, the Study Session Timer records the start time, end time, and duration of each session, making it a more specialized and academically focused alternative to general productivity tools like Google Calendar, Todoist, and Notion.

CHAPTER 1: INTRODUCTION

1.1 Background

In today's fast-paced academic environment, students are expected to manage multiple subjects, assignments, and examinations simultaneously. The increasing complexity of academic curricula often leads to poor time management, missed deadlines, and reduced academic performance. While numerous general-purpose productivity tools exist, they are not specifically designed to cater to the structured needs of student academic management.

The Learning Reminder and Study Planner Web Application is developed to address these challenges by providing students with a comprehensive, easy-to-use platform that integrates subject management, study planning, reminder notifications, study session tracking, and progress analytics into a single system.

1.2 Problem Statement

Students face multiple academic challenges on a daily basis, including:

- Difficulty managing multiple subjects and their associated tasks simultaneously.
- Forgetting important assignment deadlines and exam schedules.
- Lack of a structured academic planner tailored for student needs.
- No centralized system to monitor, time, and track study progress.
- Absence of motivational features to encourage consistent study habits.

Existing tools such as Google Calendar, Todoist, and Notion provide general task management but fail to offer subject-specific planning, study session timers, progress analytics, and motivational reward systems.

1.3 Objectives

The primary objectives of this project are:

- To develop a web-based Study Planner application tailored specifically for students.
- To provide subject-wise academic management with priority levels.
- To implement a reminder notification system for important academic deadlines.

- To record and display study session durations per task.
- To offer a progress analytics dashboard for tracking completed and pending tasks.
- To introduce a Reward Page that motivates students through badges and points.
- To display a Study Streak counter that tracks the number of consecutive days a student completes a study session.
- To highlight overdue tasks with a dedicated alert counter on the dashboard.

1.4 Scope

The scope of the Learning Reminder and Study Planner Web Application includes:

- User registration, profile management (with profile picture), and secure login system with session management.
- Subject addition, editing, deletion with priority assignment.
- Study task planning with deadline and completion status.
- Reminder system linked optionally to specific tasks.
- Study session timer recording start time, end time, and duration.
- Progress tracking and analytics dashboard.
- Reward and badge system for completed milestones.

The system is designed for individual student use on a XAMPP local server and can be extended to cloud-hosted deployment in future phases.

CHAPTER 2: LITERATURE REVIEW & EXISTING SYSTEMS

2.1 Literature Review

A thorough study of existing productivity and academic management applications was conducted to understand the current landscape of study planning tools and identify gaps that the proposed system aims to fill. Research indicates that students who use structured planning systems demonstrate improved time management and academic performance. However, most available tools are designed for general task management and do not specifically address student-centric needs.

2.2 Existing Systems

2.2.1 Google Calendar

Google Calendar is a widely used scheduling and reminder tool. While effective for general scheduling, it lacks subject-specific academic planning features, progress tracking, and any motivational system.

2.2.2 Todoist

Todoist is a task management application that supports project-based grouping and deadline reminders. It is not tailored for student academic management and does not offer structured study planning, session timers, or progress analytics.

2.2.3 Notion

Notion is a versatile workspace tool supporting notes, databases, and project management. Although highly customizable, it requires significant manual setup and does not natively offer student-focused features such as subject-wise management, study timers, or reward systems.

2.2.4 MyStudyLife

MyStudyLife is an academic planner designed for students providing class scheduling and assignment tracking. While closer to the proposed system, it lacks an integrated study session timer, reward system, and requires cloud account creation.

2.3 Comparison of Existing Systems

Table 2.1: Comparison of Existing Systems

Feature	Google Calendar	Todoist	Notion	Study Planner
Task Scheduling	Yes	Yes	Yes	Yes
Reminder System	Yes	Yes	Yes	Yes
Subject-wise Study Mgmt.	No	No	Limited	Yes
Study Planner for Students	No	No	Limited	Yes
Academic Progress Tracking	No	No	No	Yes
Reward & Motivation System	No	No	No	Yes
Study Session Timer	No	No	No	Yes

2.4 Research Gap

Based on the analysis of existing systems, the following research gaps have been identified:

- No existing tool offers a fully integrated student-centric platform combining subject management, study session timing, reminders, progress analytics, and a reward system.
- Most tools are designed for general productivity rather than structured academic study management.
- Motivational features such as reward systems and achievement badges are absent in existing academic tools.
- Study session time tracking at the task level is not supported by any reviewed tool.

CHAPTER 3: PROPOSED SYSTEM

3.1 Overview

The proposed Learning Reminder and Study Planner Web Application is a student-centric academic management platform built using standard web technologies. The system provides a comprehensive solution by integrating all essential academic management features including a study session timer and a motivational reward system into a unified, easy-to-use interface.

3.2 System Features

Table 3.1: System Features and Modules

Module	Description
Login & Registration	User authentication: users can create an account with name, email, phone, and profile picture, and log in securely using a password.
Dashboard	Shows 7 summary cards: Total Subjects, Total Tasks, Completed, Pending, Study Streak, Total Study Hours, and Overdue Tasks. Also shows Today's Tasks, Upcoming Reminders, and Recent Study Tasks.
Subject Management	Add, edit, delete subjects with priority levels (High / Medium / Low).
Study Planner	Students can add tasks with a topic, subject, and deadline. Each task shows time spent and has Start, Stop, Complete, and Delete buttons.
Reminder System	Set date-time based reminders (optionally linked to tasks). Status tracked as Pending / Done.
Progress Analytics	Visual display of completed vs pending tasks and accumulated study time from sessions.

Study Session Timer	A live timer runs inside each task card. It shows elapsed time in real-time. Start and stop times are saved in the database.
Streak Tracker	Tracks consecutive days of study activity. Each day a student completes at least one study session, the streak count increments. Missing a day resets the streak to zero.
Profile Management	Allows students to view and update their personal information including name, email, phone number, and profile picture and reset password.
Reward Page	Milestone tracker: earns points per completed task; upgrades badge level (Beginner → Bronze → …) stored directly in the users table.

3.3 Reward Page

The Reward Page that motivates students through tangible recognition for consistent academic effort. Key aspects include:

- Milestone Tracking: The system tracks completed tasks and accumulates points in the users.points column.
- Badge Levels: Upon reaching thresholds, the users.badge field upgrades (Beginner → Bronze → Silver → Gold).
- Points Display: The reward dashboard shows total points earned and current badge level.
- Motivation Messages: Inspirational messages encourage students to continue their study efforts.

This feature is unique to the proposed system; none of the reviewed existing tools offer an integrated reward and motivation system.

3.4 System Architecture & Diagrams

3.4.1 System Architecture Diagram

The Learning Reminder & Study Planner Web App is a web-based system that helps students manage their study tasks, subjects, and reminders efficiently.

The system follows a three-tier architecture:

Frontend (HTML, CSS, JavaScript):

Provides the user interface where students can register, log in, add subjects, create study plans, set reminders, and track progress.

Backend (PHP):

Handles all application logic such as authentication, session management, task processing, reminder handling, and reward calculation.

Database (MySQL):

Stores all application data including users, subjects, tasks, study sessions, and reminders.

Additionally, the system uses:

Chart.js for displaying progress analytics

Browser Notification API for reminder alerts within the website

FPDF for generating downloadable progress reports

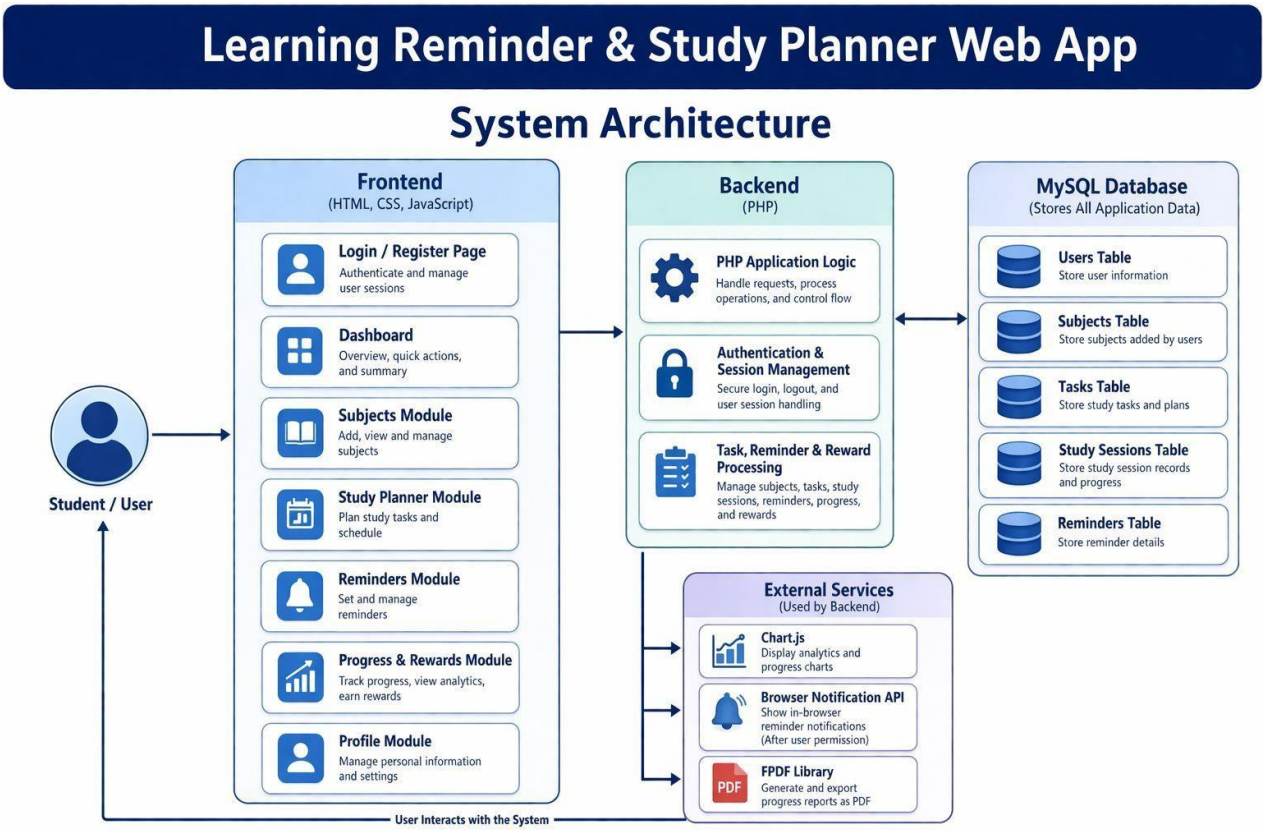

Fig 3.1: System Architecture Diagram

3.4.2 Flowchart Diagram

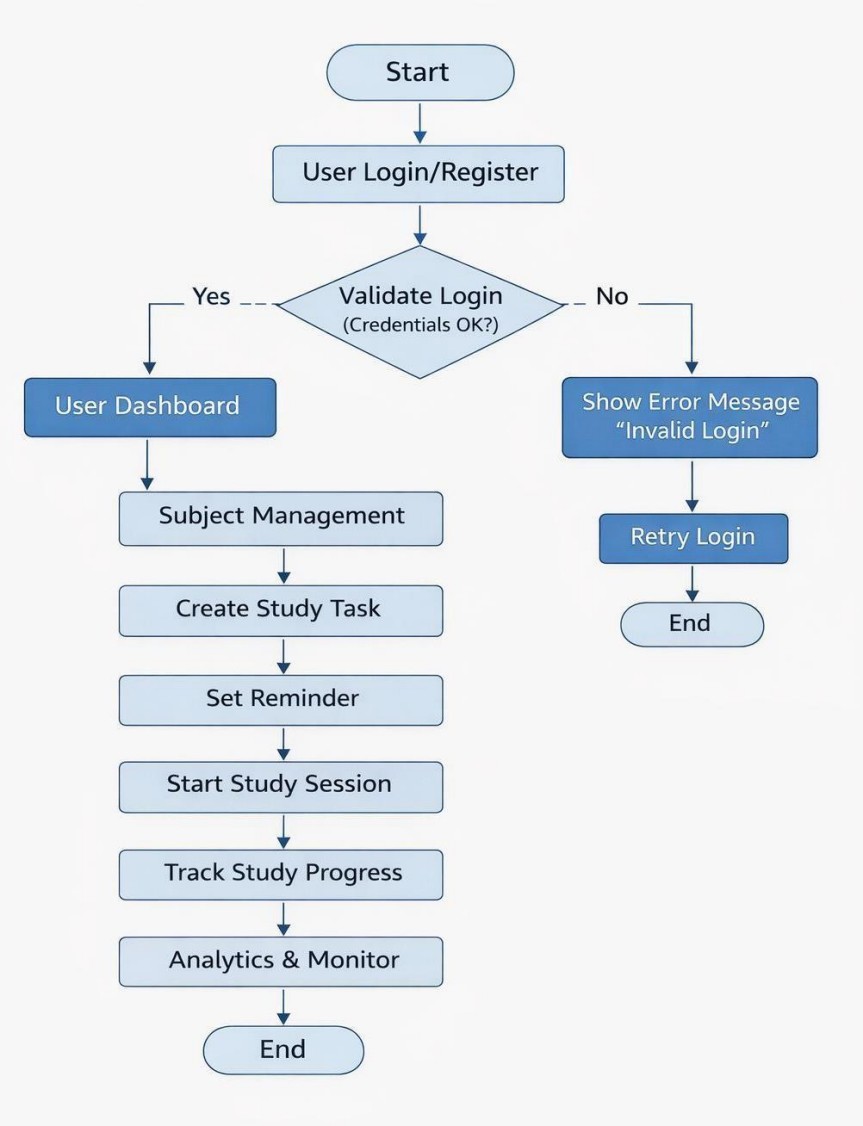

Fig 3.2: Flowchart Diagram

3.4.4 Gannt chart Diagram

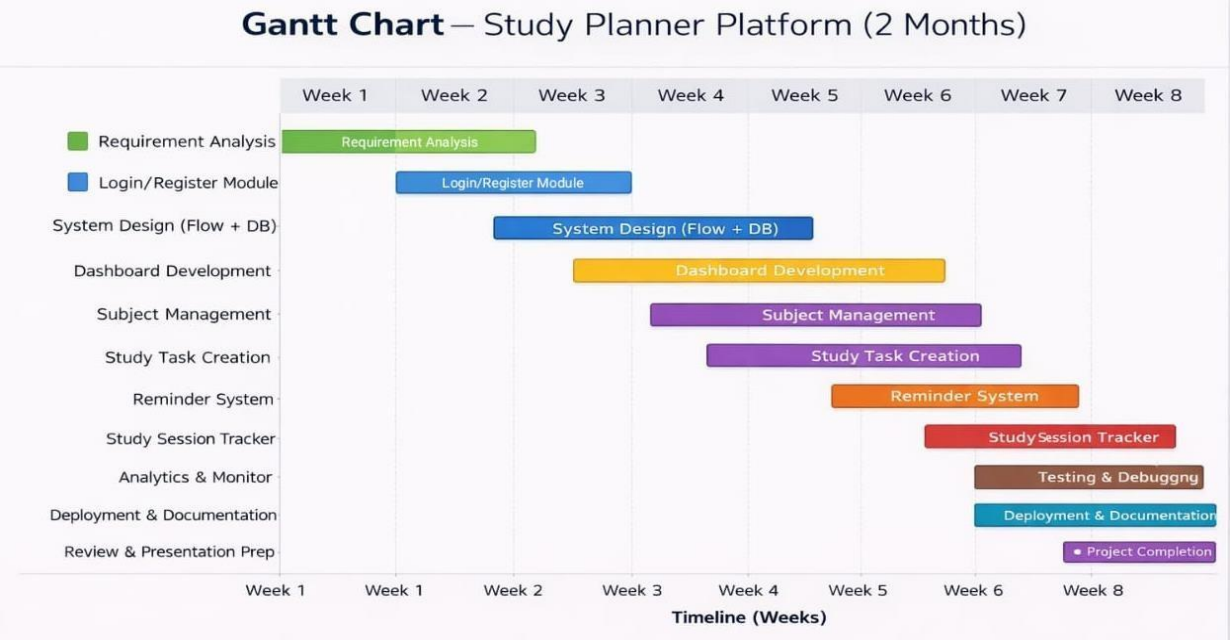

Fig 3.3: Gantt chart Diagram

3.4.5 Workflow Diagram

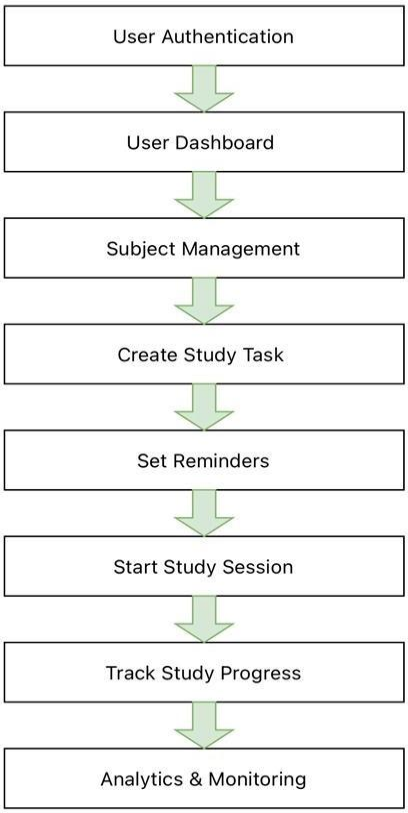

Fig 3.4: Workflow Diagram

3.4.6 Use Case Diagram

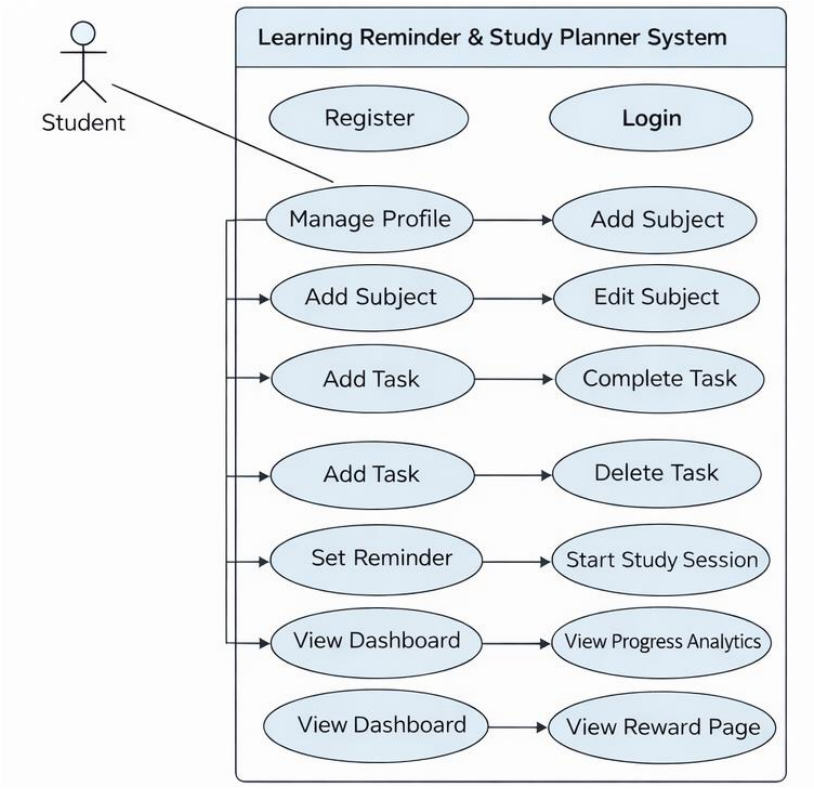

Fig 3.5: Use Case Diagram

3.4.7 ER-Diagram

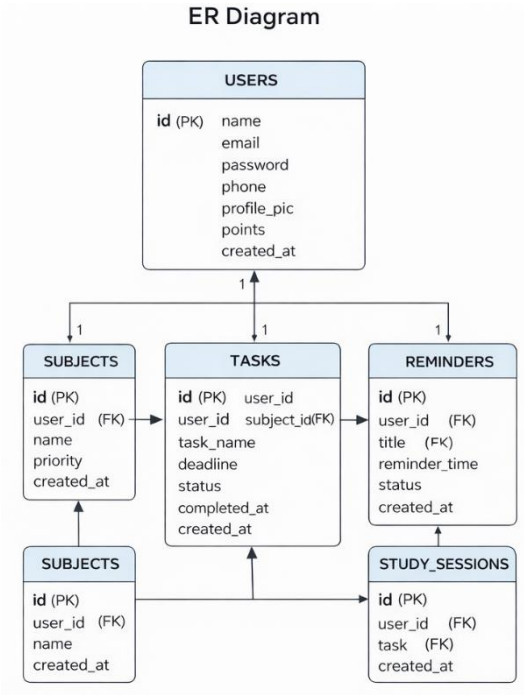

Fig 3.6: ER - Diagram

3.4.8 System Workflow

The application follows this workflow:

- Step 1: Student registers with name, email, phone, and password; profile picture can be uploaded.
- Step 2: Student adds subjects with priority levels (High / Medium / Low).
- Step 3: Study tasks are created under subjects with deadlines.
- Step 4: Reminders are set (optionally linked to tasks) for upcoming deadlines.
- Step 5: The student starts a study session timer for a task; start/end time and duration are recorded.
- Step 6: Completed tasks update the progress dashboard and award points/badge on the Reward Page.

3.4.9 Methodology (SDLC)

The system was developed using the Software Development Life Cycle (SDLC) methodology, following a structured sequence of phases: Requirement Analysis, System Design, Development, Testing, and Deployment. In the Requirement Analysis phase, user needs such as task management, reminders, study tracking, and reward features were identified. During System Design, the application architecture, database schema, and user interface layouts were planned.

The Development phase involved implementing the frontend using HTML, CSS, and JavaScript, and the backend using PHP with a MySQL (MariaDB) database. In the Testing phase, the system was rigorously tested to ensure functionality, usability, and error handling. Finally, the application was deployed on a XAMPP local server environment for demonstration and evaluation purposes.

CHAPTER 4: TOOLS & TECHNOLOGIES

4.1 Technology Stack

Table 4.1: Technology Stack

Layer	Technology Used
Frontend	HTML5, CSS3, JavaScript (ES6)
Backend	PHP 8.2 (Server-side scripting)
Database	MySQL / MariaDB 10.4 (via phpMyAdmin)
Local Server	XAMPP (Apache + MySQL)
Development OS	Windows

4.2 Frontend Technologies

The frontend is developed using HTML5, CSS3, and JavaScript (ES6). HTML5 provides the structural foundation, CSS3 handles styling and responsive layout, and JavaScript enables dynamic interactions including the real-time study session timer.

4.3 Backend Technology

PHP 8.2 is used as the server-side scripting language for user authentication, session management, data processing, form handling, badge/point calculations, and communication with the MariaDB database.

4.4 Database

MySQL (MariaDB 10.4) managed via phpMyAdmin is used as the RDBMS. The database named study_planner contains five tables: users, subjects, tasks, reminders, and study_sessions. Foreign key constraints with CASCADE DELETE ensure referential integrity across all relational tables.

4.5 Development Server

XAMPP provides the integrated Apache web server and MySQL/MariaDB server environment, enabling the full web application stack to run locally during development and demonstration.

CHAPTER 5: IMPLEMENTATION

5.1 Module Implementation

5.1.1 Login & Registration

The Login and Registration module is used to authenticate users and allow secure access to the system. New users can create an account by entering their name, email, phone number, password, and optional profile image. During registration, the system validates input fields, checks for duplicate email addresses, and stores the password in encrypted form using password hashing.

The login page verifies the user's email and password using PHP sessions. After successful login, the user is redirected to the dashboard. If invalid credentials are entered, an error message is displayed. This module ensures that only registered users can access the study planner features.

5.1.2 Dashboard

The Dashboard acts as the home page of the system after login. It provides an overview of the student's study activity and performance. The dashboard displays summary cards such as total subjects, total tasks, completed tasks, pending tasks, study streak, study hours, and overdue tasks. It also shows sections like today's tasks, upcoming reminders, and recent study tasks. Data is dynamically fetched from the MySQL database and displayed in a user-friendly format. This page helps the student quickly understand their current progress and pending work.

5.1.3 Subject Management

The Dashboard acts as the home page of the system after login. It provides an overview of the student's study activity and performance. The dashboard displays summary cards such as total subjects, total tasks, completed tasks, pending tasks, study streak, study hours, and overdue tasks. It also shows sections like today's tasks, upcoming reminders, and recent study tasks. Data is dynamically fetched from the MySQL database and displayed in a user-friendly format. This page helps the student quickly understand their current progress and pending work.

5.1.4 Study Planner

The Subject Management module allows users to create and manage subjects for study planning. The student can add subject names along with priority levels such as high, medium, or low. These subjects are stored in the database and displayed as subject cards.

Users can also delete subjects when no longer needed. This module helps in organizing study tasks subject-wise and makes the study planner structured and easy to use.

5.1.5 Reminder System

The Study Planner module is the core part of the application. It allows the student to create study tasks or topics by selecting a subject and setting a deadline. All tasks are stored in the database with their current status such as pending or completed.

The system validates inputs, prevents past date selection, and shows tasks in a list with controls for start, complete, and delete. This module helps the student plan topic-wise study in an organized manner and maintain proper deadlines.

5.1.6 Study Session Timer

The Reminder System helps students remember important study-related activities such as assignments, exams, and deadlines. Users can set reminders by entering a title and selecting date and time. The reminder data is stored in the database and displayed in the reminders page.

The system marks reminders as pending, done, or overdue based on the current date and time. It also supports browser-based notifications, which alert the user inside the browser after permission is granted. This module improves productivity by ensuring that important study tasks are not missed.

5.1.7 Progress Analytics

The Progress Analytics module provides a visual representation of the student's study performance. It calculates the total number of tasks, completed tasks, pending tasks, and completion percentage from the database.

The results are displayed as summary cards and graphical charts using Chart.js. The system also supports PDF export of progress reports using FPDF. This module helps students analyze their study habits and understand their performance in a clear and interactive way.

5.1.8 Reward Page

The Reward Page motivates users by providing rewards based on their performance. The system assigns points and badges such as Beginner, Bronze, Silver, and Gold depending on the number of completed tasks.

It also shows the current level, total points, and progress toward the next badge. This module encourages consistency and enhances user engagement.

5.2 Database Design

The study_planner MySQL database contains five tables. Their complete schemas derived from the actual phpMyAdmin SQL dump are presented below.

5.2.1 Table: users

Table 5.1: Database Schema – users

Field	Data Type	Default / Extra	Key / Constraint	Description
id	INT(11)	AUTO_INCREMENT	PRIMARY KEY	Unique user identifier
name	VARCHAR(100)	NOT NULL	—	Full name of the student
email	VARCHAR(100)	NOT NULL	UNIQUE KEY	Student email address
password	VARCHAR(255)	NOT NULL	—	Bcrypt-hashed password
created_at	TIMESTAMP	DEFAULT current_timestamp()	—	Account registration time
phone	VARCHAR(20)	DEFAULT NULL	—	Optional contact number
profile_pic	VARCHAR(255)	DEFAULT NULL	—	Profile picture filename
points	INT(11)	DEFAULT 0, NOT NULL	—	Reward points accumulated
badge	VARCHAR(50)	DEFAULT 'Beginner'	—	Current badge level (Beginner/Bronze/…)

5.2.2 Table: subjects

Table 5.2: Database Schema – subjects

Field	Data Type	Default / Extra	Key / Constraint	Description
id	INT(11)	AUTO_INCREMENT	PRIMARY KEY	Unique subject identifier
user_id	INT(11)	NOT NULL	FK → users(id) ON DELETE CASCADE	Owner of the subject
name	VARCHAR(100)	NOT NULL	—	Subject name (e.g. OS, JS)
created_at	TIMESTAMP	DEFAULT current_timestamp()	—	Subject creation timestamp
priority	ENUM('high','medium','low')	NOT NULL	—	Study priority level

5.2.3 Table: tasks

Table 5.3: Database Schema – tasks

Field	Data Type	Default / Extra	Key / Constraint	Description
id	INT(11)	AUTO_INCREMENT	PRIMARY KEY	Unique task identifier
user_id	INT(11)	NOT NULL	FK → users(id) ON DELETE CASCADE	Student who owns the task
subject_id	INT(11)	NOT NULL	FK → subjects(id) ON DELETE CASCADE	Related subject
task_name	VARCHAR(255)	NOT NULL	—	Title of the study task
deadline	DATE	NOT NULL	—	Task deadline date
status	ENUM('pending','completed')	DEFAULT 'pending'	—	Current completion status

created_at	TIMESTAMP	DEFAULT current_timestamp()	—	Task creation timestamp
completed_at	DATETIME	DEFAULT NULL	—	Timestamp when task was marked complete

5.2.4 Table: reminders

Table 5.4: Database Schema – reminders

Field	Data Type	Default / Extra	Key / Constraint	Description
id	INT(11)	AUTO_INCREMENT	PRIMARY KEY	Unique reminder identifier
user_id	INT(11)	NOT NULL	FK → users(id) ON DELETE CASCADE	Student who set the reminder
title	VARCHAR(255)	NOT NULL	—	Reminder title/message
task_id	INT(11)	DEFAULT NULL	FK → tasks(id) ON	Optional linked task

			DELETE CASCADE	
reminder_time	DATETIME	DEFAULT NULL	—	Scheduled date & time
status	ENUM('pending','done')	DEFAULT 'pending'	—	Reminder completion status
created_at	TIMESTAMP	DEFAULT current_timestamp()	—	Record creation timestamp

5.2.5 Table: study_sessions

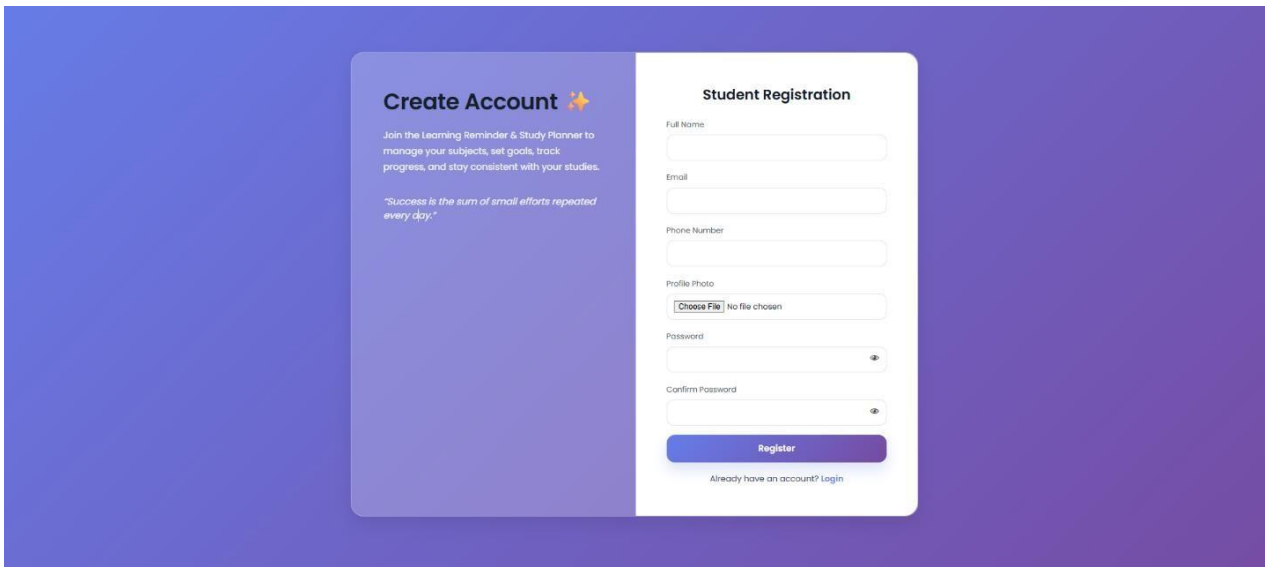
Table 5.5: Database Schema – study_sessions

Field	Data Type	Default / Extra	Key / Constraint	Description
id	INT(11)	AUTO_INCREMENT	PRIMARY KEY	Unique session identifier
user_id	INT(11)	NOT NULL	—	Student who studied
task_id	INT(11)	NOT NULL	—	Task being studied
start_time	DATETIME	NOT NULL	—	Session start date & time
end_time	DATETIME	DEFAULT NULL	—	Session end date & time
duration_seconds	INT(11)	DEFAULT 0	—	Total study time in seconds
created_at	TIMESTAMP	DEFAULT current_timestamp()	—	Record creation timestamp

CHAPTER 6: RESULTS

6.1Login & Registration

Students register by providing name, email, phone, password, and an optional profile picture. Passwords are stored using PHP bcrypt hashing. Session management ensures secure access. New accounts default to 0 points and the 'Beginner' badge.



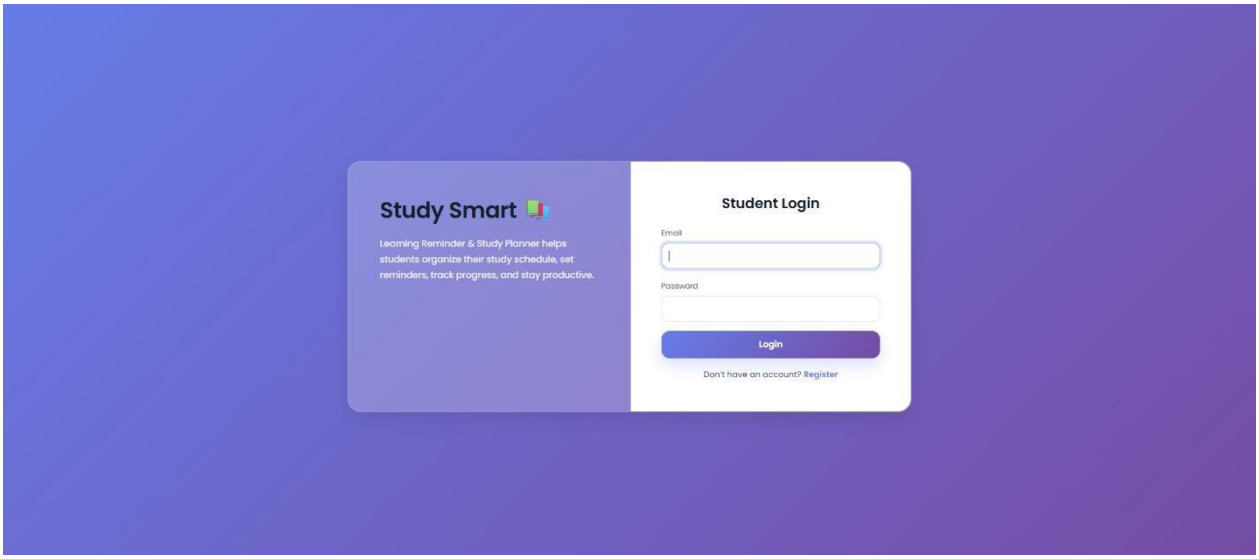


Fig 5.1: Login & Registration Page

6.2 Dashboard

The dashboard shows 7 summary cards — Total Subjects, Total Tasks, Completed, Pending, Study Streak, Total Study Hours, and Overdue Task. Below the cards, students can see Today's Tasks, Upcoming Reminders, and Recent Study Tasks with Pending.

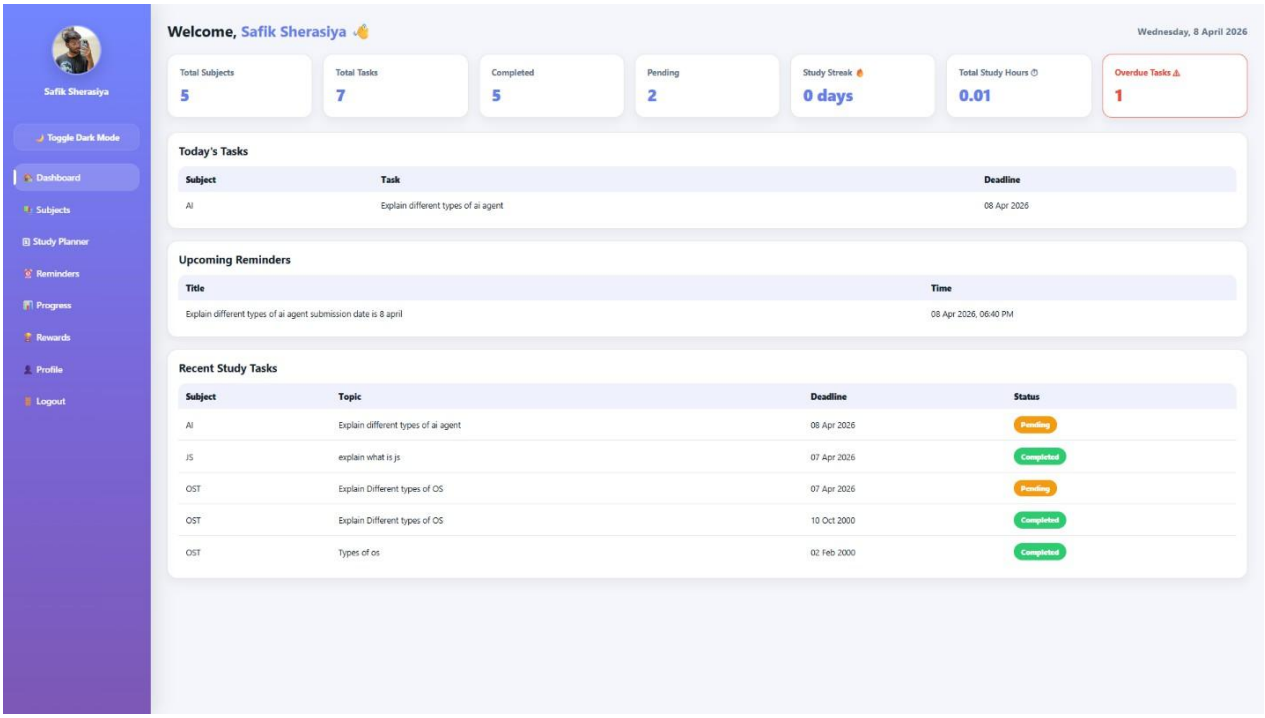

Fig 5.2: Dashboard Page

6.3 Subject Management

Students add subjects with a name and a priority level (High / Medium / Low). Subjects can be edited or deleted; deletion cascades to associated tasks and reminders.

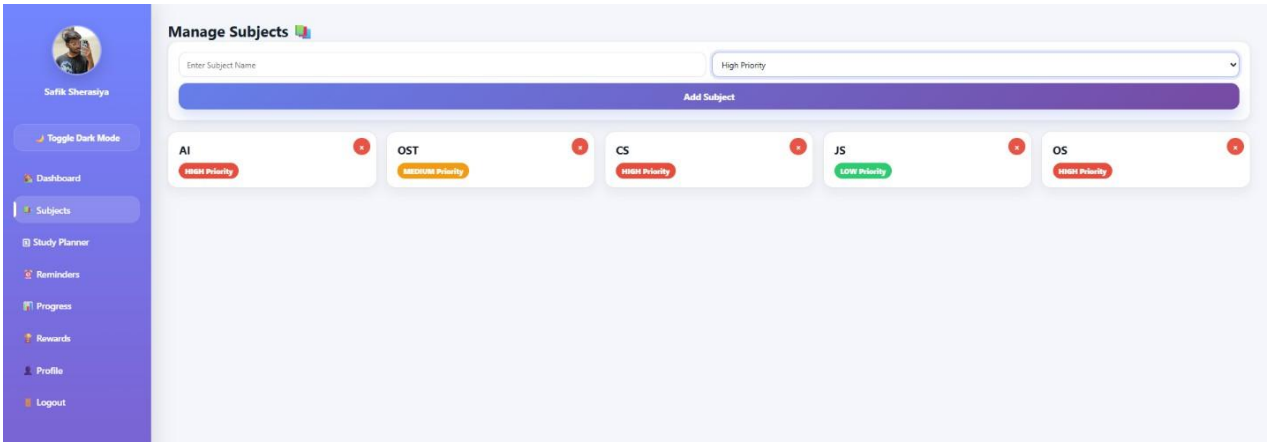

Fig 5.3: Subject Management Page

6.4 Study Planner

Students add tasks by entering a topic, selecting a subject, and choosing a deadline. Each task card shows the subject, deadline, and total time spent. Buttons available are Start , Complete and Delete.

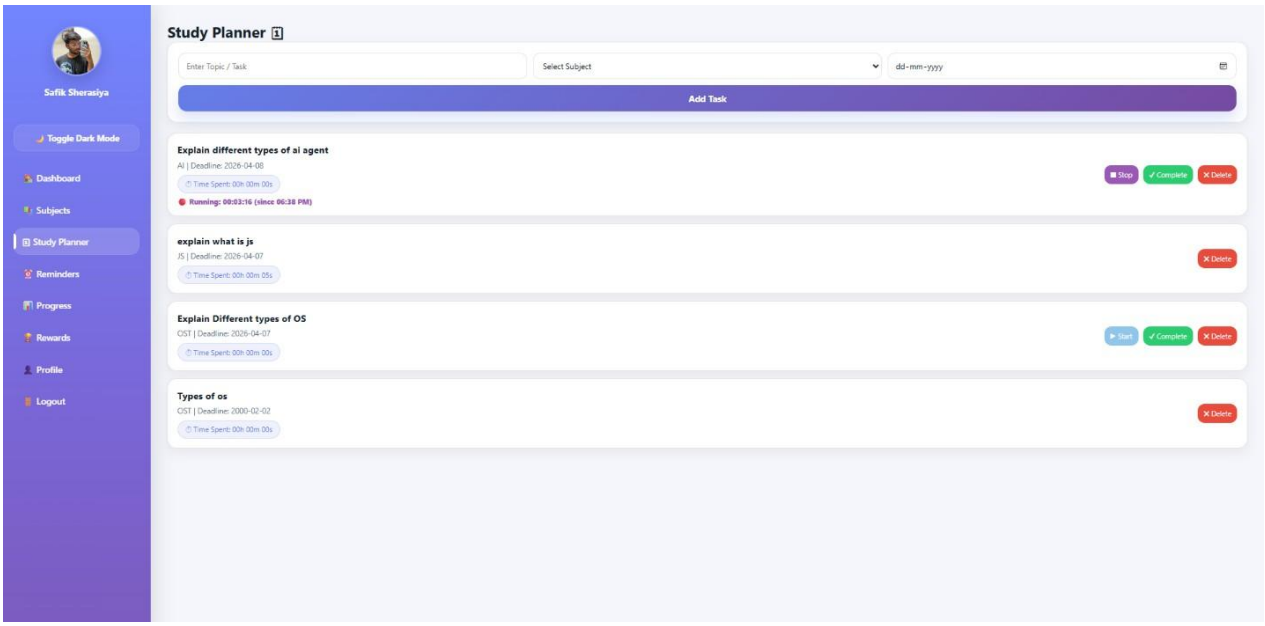

Fig 5.4: Study Planner Page

6.5 Reminder System

Reminders are created with a title, scheduled datetime, and an optional link to a task. Status is tracked as Pending or Done. Active reminders appear on the dashboard.

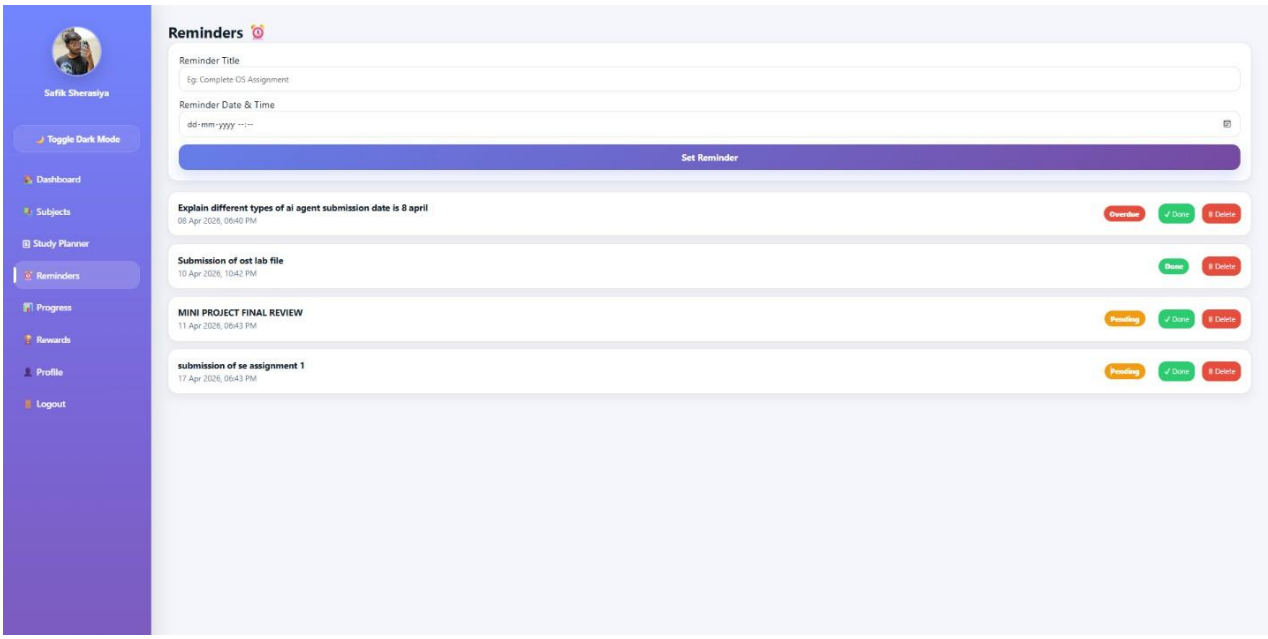

Fig 5.5: Reminder System Page

6.6 Study Session Timer

Each task has a built-in timer. Clicking Start records the start time. A live red timer shows how long the session has been running Clicking Stop saves the end time and duration. Total time spent is shown on the task card.

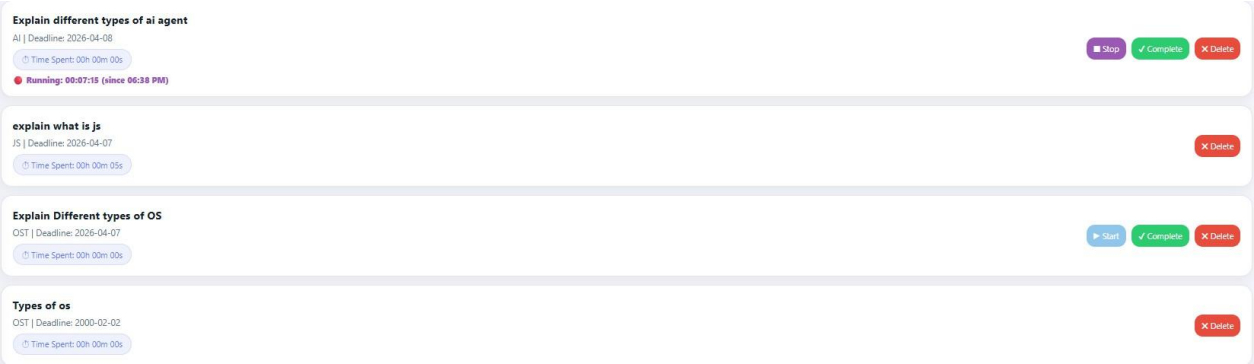

Fig 5.6: Study Session Timer

6.7 Progress Analytics

The analytics module displays completed vs pending tasks and total study time aggregated from study_sessions. Visual charts give students a clear picture of their academic productivity.

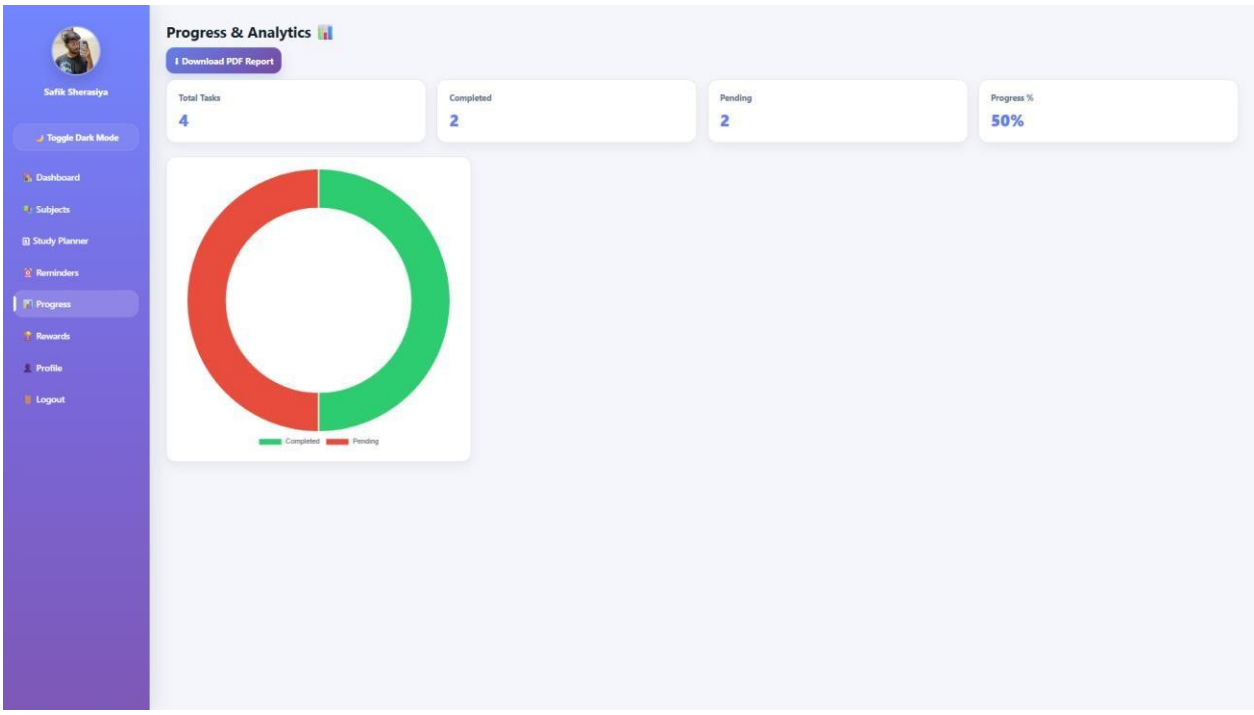

Fig 5.7: Progress Analytics Page

6.8 Reward Page

The Reward Page queries the users table for the current points and badge values. Each task completion triggers a PHP script that increments points and re-evaluates the badge level. Students see earned badges, total points, and motivational messages.

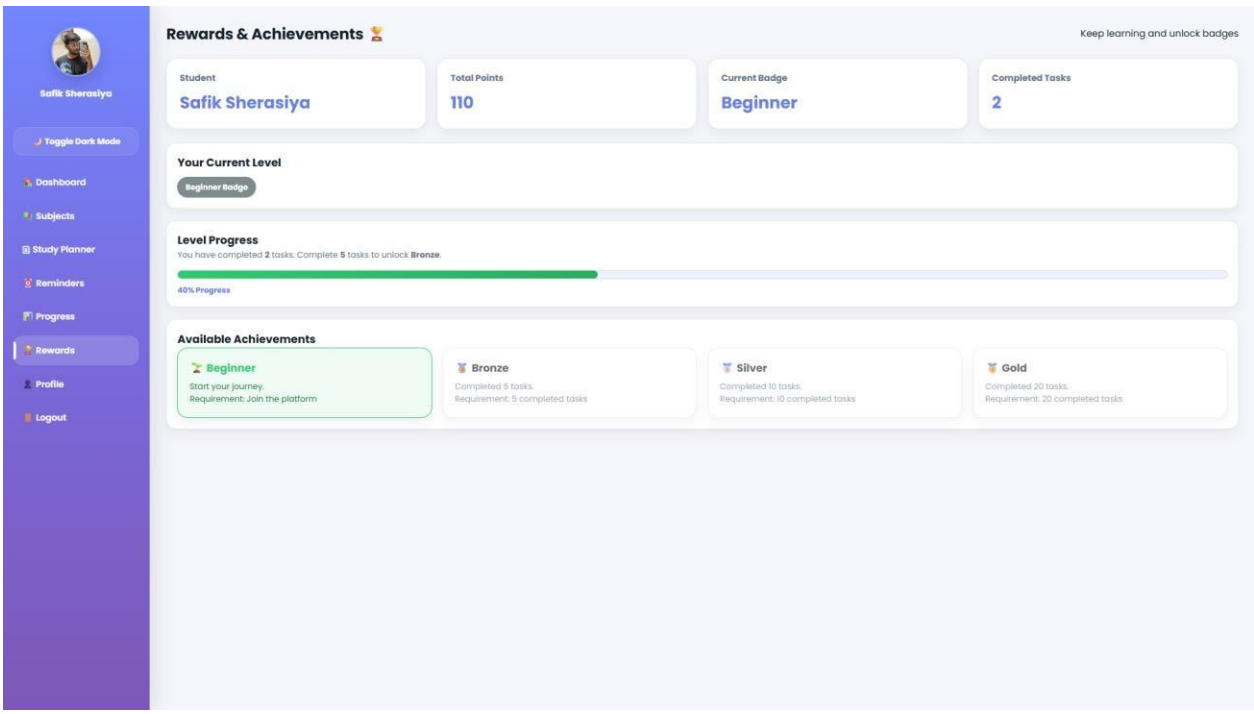

Fig 5.8: Reward Page

CHAPTER 7: CONCLUSION

The Learning Reminder and Study Planner Web Application has been successfully designed and implemented as a comprehensive academic management tool for students. The system addresses the key challenges of managing study schedules, deadlines, and academic progress through a unified web platform.

The application integrates subject management (with priority levels), study task planning, a datetime-based reminder system, a task-level study session timer, progress analytics, and— a Reward Page that motivates students through achievement badges and reward points stored in the database.

The database (study_planner) consists of five well-structured relational tables — users, subjects, tasks, reminders, and study_sessions — with proper foreign key constraints ensuring referential integrity. The use of standard web technologies (HTML5, CSS3, JavaScript, PHP 8.2, MySQL/MariaDB, XAMPP) ensures the system is accessible, maintainable, and extensible.

Future enhancements may include cloud hosting, mobile application development, AI-powered study schedule recommendations, integration with institutional LMS platforms, and advanced analytics with performance trend visualization.
